About Antarctic Field Guides

About the project

The Antarctic Field Guides is a collaborative tool offering free access to information that can help you identify Antarctic organisms. Thanks to the initial efforts from Prof. Andrew Clarke (British Antarctic Survey) and Dr Stefano Schiaparelli (University of Genoa and Italian National Antarctic Museum), it allows users to build a tailor-made, customized guide, to be taken in the field or simply browsed. The pages are generated on-the-fly from the contents of authoritative, quality controlled data resources ([SCAR-MarBIN](#) and [ANTABIF](#)), and ensures the user to access up-to-date information about the group of organisms he/she is particularly interested in. Even if the primary focus is for scientists, the AFGs are open and free for all to enjoy.

Livingston Island

Description

Livingston Island (historical Russian name Smolensk, $62^{\circ}36'S$ $60^{\circ}30'W$) is an Antarctic island in the South Shetland Islands, Western Antarctica lying between Greenwich Island and Snow Islands. This island was known to sealers as early as 1819, and the name Livingston, although of unknown derivation, has been well established in international usage since the 1820s.
